EXPERIENCE

Full-Stack Software Engineer

2025 October – July 2026 | Contract

OpenSFF 🌐

Wyoming, United States

- Engineered a Flutter-based real-time VNC client application with WebSocket integration, enabling low-latency bidirectional input and rendering.
- Optimized a real-time rendering pipeline in Rust, reducing frame latency by 88% (600ms → 70ms) through low-level performance tuning.
- Reduced network payload size by 90.57% by implementing efficient encoding strategies, improving bandwidth efficiency in real-time systems.
- Developed concurrent processing pipelines using multi-threading and message passing, improving system responsiveness and throughput.
- Contributed to the design and development of a full-stack management platform integrating Redfish-compliant APIs for real-time control, configuration, and monitoring of distributed systems.
- Architected a static-first content system using Next.js for a blog platform, enabling scalable publishing of 50+ MDX articles with CDN-backed performance.

Full-Stack Software Engineer

2025 July – July 2026 | Contract

Tekkio, LLC. 🌐

Wyoming, United States

- Served as a key developer in the architecture and development of a kiosk-based animal shelter management platform using Flutter and Rust, supporting 150 volunteers with a focus on accessibility for elderly and accessibility-focused users.
- Engineered a full-stack ticketing platform with Next.js and Rust, implementing role-based authorization, advanced search, filtering, and pagination.
- Designed and delivered RESTful APIs supporting authentication, ticket workflows, and high-performance data access.
- Reduced API latency and request overhead by batching asynchronous calls and optimizing SQL queries with indexing and caching.
- Designed and enforced end-to-end data validation and type-safe schemas, for ensuring consistency across frontend-backend interactions.
- Strengthened application security by integrating XSS mitigation and input sanitization, validated against external security test suites.
- Developed search and filtering for tickets with debounced inputs and URL state persistence, enabling shareable application states.

Junior Frontend Engineer

2024 Sep – 2025 Feb | Full Time

Softwarez at its Best, Inc. 🌐

Cebu City, Philippines

- Developed multiple responsive websites with Gatsby/Material UI for React and Blazor/MudBlazor for .NET projects.
- Contributed frontend fixes and feature enhancements to production web applications by completing tickets and resolving issues from the GitHub board.
- Authored an 80-page documentation using Typst to outline front-end standards and streamline the onboarding process for new developers.
- Built custom components, including carousels and animated UI elements, implemented theming, and added dark/light mode.
- Enhanced website performance, accessibility, and SEO by implementing improvements identified through Google Lighthouse audits.

EDUCATION

B.S. Computer Science

2022 Jan – 2025 Dec | Cebu City, Philippines

University of San Carlos 🌐

GWA: 1.6 / 1.0

- Consistent Deans Lister for 2022 January - 2025 December
- Relevant Coursework: Algorithms & Data Structures, Programming Languages, Operating Systems, Networking, System Design and Analysis, Data Analysis, Information Assurance and Security, Web and Mobile Development.

SKILLS

- Languages:** Javascript, Typescript, C, C#, Python, Dart, Rust
- Frontend:** HTML5, CSS3, Tailwind, React, Gatsby, Next.js, Flutter
- Backend:** Node.js, Express, ASP.NET Core, DrizzleORM, REST APIs, Websockets
- Database:** MySQL, SQLite, Turso, PostgreSQL
- Hosting and Deployment:** Vercel, Render, Docker, AWS EC2, Nginx
- Tools:** Git, Github, VS Code, Postman, Figma, Typst, Bash, Ubuntu, OpenAI Codex
